

Neil Parikh

Co-founder and Chief Operating Officer

As COO, Neil oversees Casper's operations and supply chain teams. He also plays an instrumental role in shaping company culture as Casper becomes the world's first end-to-end sleep brand. Neil launched an international non-profit organisation while studying at Brown, where he was class president, and was accepted to medical school at 17. Neil is a true entrepreneurial polymath — prior to founding Casper, he designed bacteria and worked on robotics at NASA, where he co-authored 3 patents. In 2014, Neil left medical school to launch Casper. As the son of a sleep doctor, he was perfectly positioned to bridge the gap between the science of sleep and the realities of the sleep industry.
